EXPLANATORY NOTE

The Calayan Group of Islands is a 3rd class municipality in the province of Cagayan with a population of 16,233 people in 2,654 households (2007 Census). It is composed of four islands located in the Babuyan Channel: Calayan, Camiguin, Dalupiri and Babuyan Claro.

The group of islands is touted to be a hidden, virgin paradise known to tourists as a real gem of adventure. It is endowed with nature's beauty and is preserved by its seclusion. It boasts of unexploited, untouched rock formation and talcum fine white sand beaches that give new definition to an island experience.

Visitors to the group of islands are treated to unexplored mountain, forest, caves, and coves. It is known to be a sanctuary of marine life and wild life, especially the Calayan Rail, a flightless bird identified as a separate species in 2004. It boasts of green vegetation with towering mother trees, the wood of which is commonly seen in the sala of prominent persons and rich businessmen.

However, no matter how attractive to tourists this municipality is, reaching the group of islands is another matter. Although sea travel to the municipality is more exciting because of dolphins and humpback whales that welcome visitors to the Calayan Group of Islands, one has to travel for about eight (8) hours of rough seas.

To make this island municipality more attractive to foreign and local tourists, the necessary infrastructure has to be made available. And one of these is the construction of a domestic airport that will not only cater to the tourists but also to entrepreneurs willing to invest in the municipality.

It has been filed for appropriate action by the concerned Committee during the 15th and 16th Congresses. However, its consequent approval was stalled by the sine die adjournments of both Congresses.

The passage of this bill is, therefore, earnestly sought.
