House Bill No. 288

EXPLANATORY NOTE

The Philippines is an economy with abundant natural resources. According to Asian Development Bank, the country is considered to be the fifth most mineral-endowed country in the world. However, the overall contribution of metallic mining to the gross domestic product (GDP) is small at less than half a percent on average in the last five years.¹

The significant contribution of the mining industry to the national economy is dependent upon the public policies implemented. Mining policies should allow the industry to improve as well its contribution to economic growth and development. The issuance of Executive Order (EO) No. 79 set the platform for reform including the amendment to the mining fiscal regime. EO 79 recognizes the need to increase the contribution of the revenues from the mining industry as it mandates for a new law on mining fiscal regime to take effect before granting mining permits to new and pending applicants. The issuance of EO 79, therefore, is a catalyst to a more equitable sharing of revenue between the industry and the government. It signals the need to formulate an updated mechanism in promoting the social and economic welfare of the country through a new legislation rationalizing existing fiscal regime.

Presently, for large mines, mining contracts offer varying fiscal regimes and, therefore, fiscal burden are differentiated. The fiscal regime depends on whether the mine is operating in a mineral reservation and whether the mine is operated under a Mineral Production Sharing Agreement (MPSA) or Financial and Technical Assistance Agreement (FTAA). To date, almost all mining contracts are under MPSA, while those in mineral reservations are composed mainly of nickel mines. All FTAA agreements are for mines outside mineral reservations.

The complex and differentiated fiscal regime currently accorded to the mining sector is the reason for this proposed bill. A rationalized and a single fiscal regime applicable to all mineral agreements and FTAA is sought as it promotes fairness. The proposal under this bill shall be applicable to all existing and prospective large metallic, non-metallic and small-scale mines, and shall be applied to all mines regardless of whether the mine is located outside or inside a

mineral reservation. This should be viewed as a package where it is structured to satisfy the objectives of the government for a reasonable increased share without compromising the mining sector’s need for reasonable return on its investment.

Some of the key provisions of this bill are the following:

1) Impose a three percent (3%) royalty tax on large-scale mining operations located within mining reservation areas;
2) Impose a margin-based royalty tax on large-scale mining operations outside mining reservation areas ranging from 1% to 5%, as the case may be;
3) Impose a royalty tax on small-scale mining operations equivalent to one-tenth of one percent (1/10 of 1%) of gross output; and
4) Impose an additional margin-based tax on windfall profits gained from mining operations ranging from 1% to 10%, as the case may be.

Thin capitalization will be introduced in order for the businesses not to depend on excessive debt funding which would result in high interest expense deductions, and thereby reducing corporate tax liability. Furthermore, for the government to maximize its share, ring-fencing per project is proposed. This is to prevent consolidation of income and expenses of all mining projects by the same taxpayer, hence, losses from other mining projects could not be deducted from more profitable projects.

Additionally, this bill proposes to exempt mining contractors for all metallic and non-metallic mining operations, whether large- or small-scale, from the application of the confidentiality clauses of the National Internal Revenue Code of 1997, as amended, for the purpose of complying with the requirements of the Extractive Industries Transparency Initiative.

Finally, this bill proposes to require small-scale miners to register with the Mining Board of the concerned local government unit and the Mines and Geosciences Bureau. Such registration entails the securing of a Tax Identification Number from the Bureau of Internal Revenue. The Mining Board is then required to submit an annual report to the Mines and Geosciences Bureau of all small-scale mining contracts for small-scale utilization of a plot of mineral land including the respective production outputs, taxes and fees paid.

This proposed measure has been filed during the 17th Congress and approved the Third and Final Reading as House Bill No. 8400. In view of the foregoing, the immediate passage of this bill is earnestly sought.
