EXPLANATORY NOTE

Telecommunication companies have cited the objection of private villages and subdivisions to the installation of cell sites as a stumbling block in the roll out of the much needed infrastructure aimed at improving internet speed and mobile connectivity in the country. Most of the time, homeowners associations oppose the deployment of cell sites in their villages and subdivisions due to perceived health risk and aesthetic reasons. However, homeowners are also the first ones to complain of lack of connectivity and poor quality of service from the telcos.

Based on a 2016 study of TowerXchange, the Philippines has one of the lowest number of cells sites in Asia with 15,000 cell sites, as compared to 76,000 in Indonesia, 55,000 in Vietnam, 52,000 in Thailand, and 22,000 in Malaysia. This figure underscores the importance of building more cell sites in the country.

To address this problem, this bill mandates developers to reserve utility space for telecommunications facilities and infrastructure including cell sites and base stations. Approval of the homeowners association when it comes to using utility space for telecommunications infrastructure and facilities will no longer be required. Developers shall be tasked to ensure that brokers, sales persons, and dealers are aware of the location of the utility space and such information is properly disseminated to their prospective buyers.

In view of the foregoing, the immediate passage of this bill is earnestly sought.
