EIGHTEENTH CONGRESS
First Regular Session

House Bill No. 853

Introduced by DIWA Party-list Representative Hon. Michael Edgar Y. Aglipay

EXPLANATORY NOTE

According to the recent Department of Health statistics, about twenty percent (20%) of all deaths are accounted for cardiac diseases. In fact, approximately half of all deaths from heart diseases occur as Sudden Cardiac Arrest.\(^1\) It can happen at any time, to anyone, anywhere, and although pre-existing heart disease is a common cause, it may strike people with no history of cardiac disease or symptoms.\(^2\)

When a victim suffers from cardiac arrest, they have but a few short minutes before brain damage, organ damage, or even death occurs. The cardiopulmonary resuscitation (CPR), which rescue breathing coupled with chest compressions buys the victim the time that may be required to save their life.

It is only fitting for everyone, including the students in the secondary level to be prepared and knowledgeable in CPR so that when they encounter an emergency, a first aid would be readily available.
