EXPLANATORY NOTE

The Civil Engineering Law, Republic Act No. 544, which governs the practice of Civil Engineering in the Philippines, was last amended 49 years ago.

Since then, the number of registered civil engineers has grown to over 100,000 today. A new role for the civil engineer has likewise evolved in the light of the globalization and cross-boarder practice. Whereas before the civil engineer was confined to the application of technical knowledge with a boarder range of issues to deal with, the civil engineer now has to face the challenges of integrating the socio-economic and environmental issues with the technical aspects of the construction projects. The civil engineer is constantly challenged to design and build developments in a manner that is environmentally sound, socially acceptable, and globally competitive.

This bill, with its proposed amendments of the law, seeks to achieve the following objectives:

1. To attune the law to national development needs;
2. To strengthen the profession and enable civil engineers to cope with the formidable challenges brought about by globalization and cross-boarder practice;
3. To continually upgrade the level of competence of the civil engineers through:
   a. peer recognition of specialization in civil engineering;
   b. continuous professional development; and
   c. the strengthening of the accredited professional organization of civil engineers;

In view of the foregoing, the immediate passage of this proposed legislation is earnestly sought.
